Overview

SRFax Xfer is a Windows-based utility for downloading unread, received faxes and storing them on a folder on your computer that you can specify.

NOTE: You must have at least Microsoft .NET Framework 4.5. If you don't, you can download and install it from here:

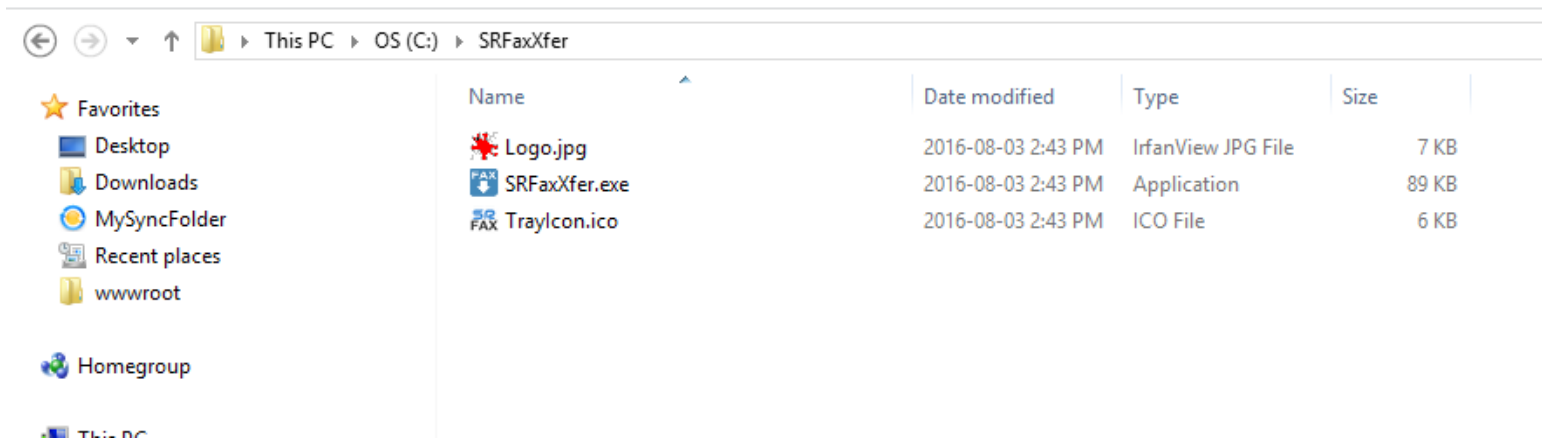

<https://www.microsoft.com/en-ca/download/details.aspx?id=30653>

Installation

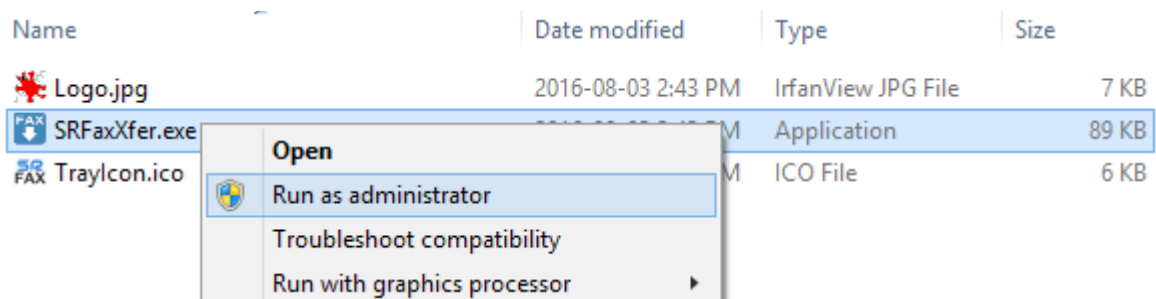

After downloading, open the ZIP file and move the entire contents into a folder anywhere on your computer. There should be 3 files:

- SRFaxXfer.exe
- Logo.jpg
- TrayIcon.ico

Note: Once you select a folder to put these files, you should not move the folder.

When running the file the first time, right click on the .exe file and select “Run as Administrator”. This will automatically put the application in your start up list, so you wont need to restart the application every time you turn on your computer.

You may get a warning screen saying “Windows Protected Your PC” and that the publisher of the program is unknown. If you see this, click “More Info” and click “Run Anyway”

Once you've run the application, you will see it appear in your system tray

Preferences

You can manage your application preferences from the Preference page. To access this, right click on the SRFax icon in the system tray and select “Preferences”. The preferences screen will load

Download Frequency

You can change how often the application checks for new faxes from the “Preferences”. The default value is once a minute

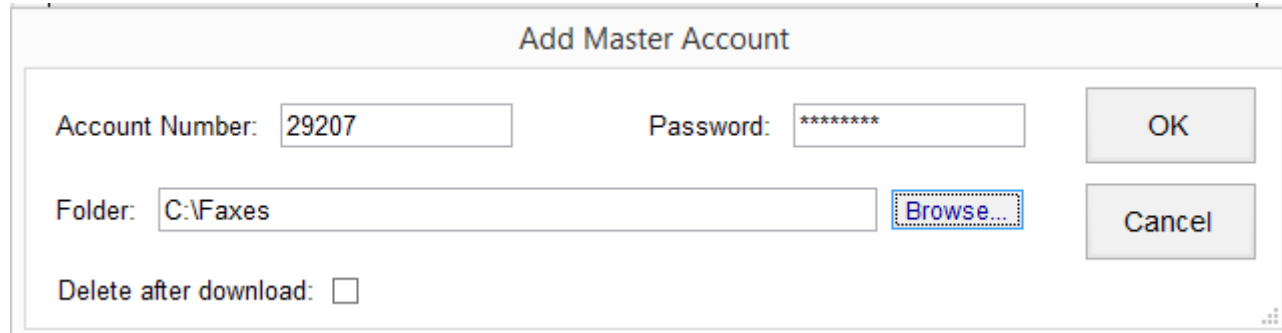

Once you've changed this value click “Save”

Add a Master Account

To add a new master account click the “Add” button. This will open up the “Add Master Account” dialogue. You'll need to enter the following pieces of information:

- Account Information
- Password
- Folder
- Delete after Download – Optional

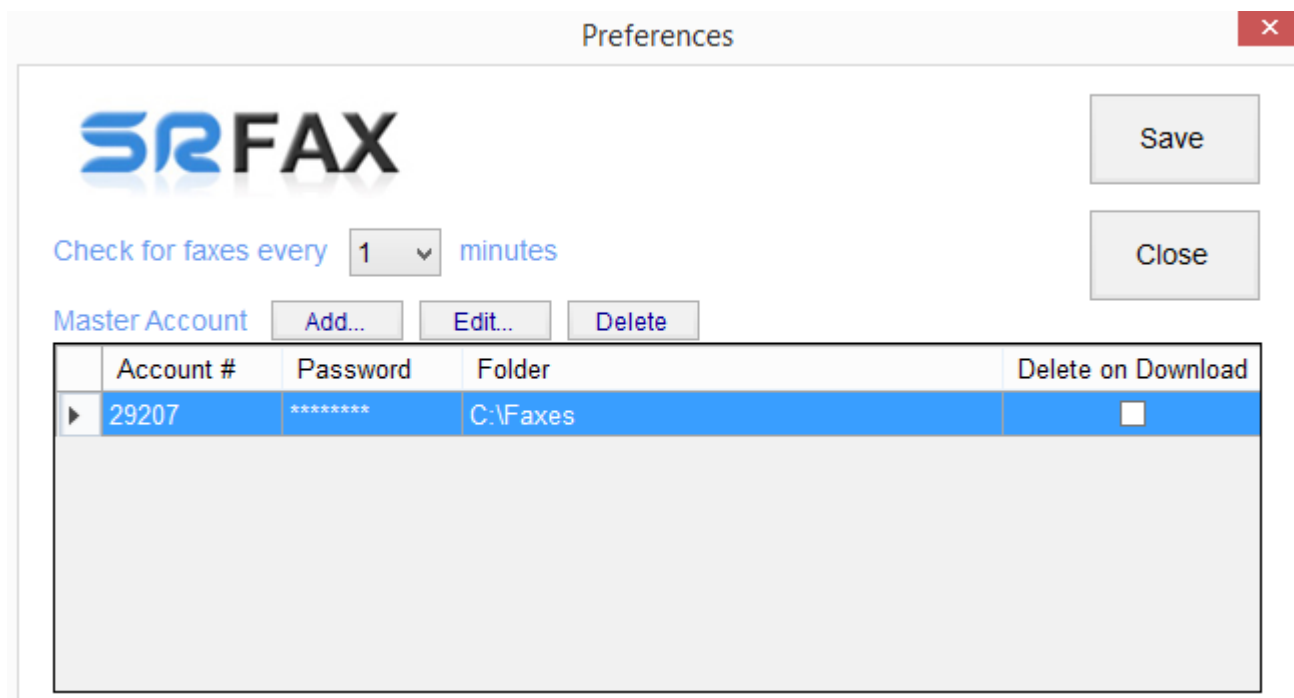

The "Add Master Account" dialog box contains the following fields and controls:

- Account Number:** Text box with value "29207".
- Password:** Text box with masked value "*****".
- Folder:** Text box with value "C:\Faxes".
- Browse...:** Button next to the folder text box.
- Delete after download:** Check box, currently unchecked.
- OK:** Button.
- Cancel:** Button.

NOTE: If you check “Delete after Download”, the faxes on your SRFax account will be deleted after they are downloaded and saved to your computer.

Click “Add” when you're finished. Your account will appear in your list.

The "SRFAX Preferences" window displays the following settings and controls:

- SRFAX Logo:** Large blue logo.
- Check for faxes every:** Dropdown menu set to "1" minutes.
- Master Account:** Section with "Add...", "Edit...", and "Delete" buttons.
- Table:** A table listing the master accounts.

	Account #	Password	Folder	Delete on Download
▶	29207	*****	C:\Faxes	<input type="checkbox"/>

Additional controls in the window include "Save" and "Close" buttons.

Use the “Edit” and “Delete” buttons to manage your accounts.

Add a Sub User

If you have any sub users, you can add them by highlighting the master account and clicking the “Add” button under the Sub Account heading. All the same fields as above are required.

Viewing Logs

You can view the applications log file by right clicking on the SRFax logo in your system tray and selecting “View Log”

Force Download

Once you add an account to the application, faxes will automatically be downloaded based on the frequency you set. However, you can trigger the download by right clicking on the SRFax logo in your system tray and selecting “Force Download”
